I have had experience of developing an online website for the College Cultural Fest Event 'Team Twister'. The site is not available as for now as it was a year back when we in group of 3 developed this site.

<https://www.facebook.com/teamtwister>

Also for now I am currently leading and developing a software engineering project called 'Intern Corner' ; an intern portal local to our institution in a group of 10 people using new technologies like Twitter Bootstrap, Boiler Templates and Modernizr.

I also worked for a startup company in summers of 2012 called 'Check Deck' to help develop a social website as a backend coder and also introduced myself with MongoDB during that period.

I am a very active, enthusiastic and hard working programmer/developer ; a fast learner and if given a chance would love to work for you as a summer intern.

Thanking you,

Akash Sharma
